A diesel engine is similar to the gasoline engine used in most cars. Both engines are internal combustion engines, meaning they burn the fuel-air mixture within the cylinders. Both are reciprocating engines, being driven by pistons moving laterally in two directions. The majority of their parts are similar.

becoming available that may dramatically reduce diesel emissions and make 2001-2010 the "Decade of Clean Diesel." Much of the history of the internal combustion engine involved a search for the best way to get more power for less fuel cost. For example, James Watt (1736-1819) successfully halved the coal consumption of Thomas
