Physical LESSON 31 Life Identifying characteristics of

Vertebrates originated about 525 million years ago during the Cambrian explosion, which saw the rise in organism diversity. The earliest known vertebrate is believed to be the Myllokunmingia. Another early vertebrate is Haikouichthys ercaicunensis. Unlike the other fauna that dominated the Cambrian, these groups had the basic vertebrate body plan: a notochord, rudimentary vertebrae, and a well ...

The first Ediacaran fossils discovered were the disc-shaped *Aspidella terranovica* in 1868. Their discoverer, Scottish geologist Alexander Murray, found them useful aids for correlating the age of rocks around Newfoundland. However, since they lay below the "Primordial Strata" of the Cambrian that was then thought to contain the very first signs of animal life, a proposal four years after their ...

Key principles Criteria; 1. Whole animal responses that differ from innocuous stimulation: Evidence of central processing of nociception involving brain areas that regulate motivated behaviour (including learning and fear) Nociceptive processing sensitive to endogenous modulators (e.g. opioids in vertebrates) Nociception activates physiological responses (one or a combination of the following ...
